

Bay-O-Net Fuse Assembly Drip Guard

GENERAL

The RTE® drip guard for sidewall mount Bay-O-Net fuse assemblies prevents dripping of oil or other insulating fluids onto molded rubber terminators, cables and arresters during removal of the bayonet fuse holder. It protects rubber products that may not be chemically compatible with the dielectric fluid.

The drip guard is installed simply by snapping it around the neck of the Bay-O-Net fuse assembly.

ORDERING INFORMATION

To order an RTE drip guard refer to Table 1.
