

Compatible Up & Down the Line

Advanced voltage regulator
communications technology

 **COOPER** Power Systems

Cooper lets you monitor – and control – your system up and down the line...wherever you are.

With Cooper's advanced communications technology, you can rest assured that the information you need to improve the performance of your system is always at hand.

Cooper technology goes beyond mere data retrieval to instantaneous two-way data communication...the communication you need to better manage your system. Functions that once could only be performed locally through a service call can now be performed remotely via phone, fiber optic, RS-232 or other means. You can monitor your system's status – modify your settings – or even operate your voltage regulators from the convenience of your office. So, whether your office is a laptop in a service truck or PC back at headquarters, you can count on Cooper to keep you connected!

And Cooper's modular approach to product design enables you to choose the most appropriate communications platform for each specific application, all while maintaining the cost benefit of standardized equipment. Simply put: you'll never get what you don't need.

*Cooper's Control Replacement Assembly (CRA) manages all McGraw-Edison® brand voltage regulators – and **all** domestically manufactured single-phase, 32-step regulators, regardless of size or capacity.*

Available Interfaces

2179 Interface Board provides for fiber optic and RS-232 or RS-485 interface with DATA 2179 communications output.

2179 Modem Interface provides for modem and fiber optic interface with DATA 2179 communications output.

DNP 3.0 Interface provides for fiber optic and RS-232 interface with DNP 3.0 communications output.

A portable data reader is also available.

Get Started with CCI.

Cooper Control Interface, our proprietary software, lets you establish and upload control settings, download readings, provide output of settings and readings, reset the metering, block automatic operation, operate the tap changer -- all through the convenience of an easy-to-use Windows based software package. Cooper communications technology. It's the proactive way of managing your system.

You Can Count on Cooper.

Cooper Power Systems is the largest US-based producer of medium-voltage distribution equipment, components and systems. We help our customers supply their customers with clean, reliable power...profitably.
