ARIES™ Recloser

Increase Your Productivity

Description:

The ARIES™ recloser combines the functional requirements of standard reclosers with integrated control functionality and wireless communications.

Reduce Inventory Costs

Increase inventory turns and save up to 15-20% in inventory costs. The new ARIES recloser reduces the multiple components (reclosers, cables, and controls) to a single line item for substation and line applications. Eliminate excess inventory of spare cables of multiple lengths, cabinets, batteries, etc., as these are not required with the ARIES recloser.

Reduce Installation Costs

Reduce your installation costs up to 25% by eliminating the added labor and material costs to install control cabinets, power cables, control cables, cable guard, locking sleeves, cabinet locks, cabinet grounds, etc. The lightweight, self-contained ARIES recloser allows faster installation with utility trucks since there is less equipment to install, wire, and verify before commissioning.

Reduce Maintenance Costs

You'll have less equipment to maintain with the ARIES recloser and could realize an annual savings of up to \$500 a year by eliminating battery inspections and replacement. The control battery is eliminated, along with the entire cabinet and standard maintenance items such as control gaskets, cables, hinges, locking sleeves, and wiring.

Minimize Training Costs

The ARIES recloser simplifies your system, all without a ladder. Accessed wirelessly via PC or PDA, the Virtual Front Panel interface is designed to look like a Form 6 control, minimizing training for test and line technicians already familiar with Cooper controls.

The technology is here now - get connected to safe, more cost-effective power solutions with ARIES reclosers. Go to cooperpower.com for more information or call 877-CPS-INFO for complete ARIES recloser technical specifications.
