

At Cooper Power Systems, we'll go to work with you on distribution automation solutions that meet your needs, your budget, and your regulatory mandates.

We'd like to start by meeting your automation personnel.

The best approach to automating your distribution system balances your need to improve power quality, reliability, and customer service with the cost of implementing the solution.

Cooper Power Systems can show you how to get the maximum return on your investment. Our engineers can help you develop a cost-effective, step-by-step upgrade of your existing system that can be

rolled out over time. We can also provide tools that demonstrate specific savings and payback figures to help you cost-justify your automation strategy.

We offer more than 80 years of experience built into flexible distribution automation solutions that include

Kyle reclosers and controls, the first choice among electric utilities around the world. **Kearney** switches to ensure the highest quality in switching and line monitoring. **McGraw-Edison** voltage regulators and capacitors to improve power quality. And **Edison** relays, which integrate control and protection into a platform that is unequalled for substation automation.

So give us the chance to sit down with you, roll up our sleeves, and devise an automation plan that meets all your requirements. Contact us at www.cooperpower.com.

You Can Count On Cooper Power Systems Down The Line.
